Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-41, drawn to Method and Apparatus for Doppler phase velocity unwrapping, classified in class 600, subclass 455.
- II. Claims 42-45, drawn to Method for data-based optimizing of imaging parameters for different imaging modes, classified in class 600, subclass 440.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in systems and methods involving only Doppler measurements or involving independently optimized additional modes together with Doppler measurements. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 3737

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
